## 8 Exposure controls/personal protection

**Control parameters**
**Components with limit values that require monitoring at the workplace:**

CAS: 13463-67-7 Titanium dioxide

 ACGIH - TLV Long-term value: 10 TWA, mg/m<sup>3</sup>  
 respirable fraction 1mg/m<sup>3</sup> TWA

 OSHA - PEL Long-term value: 15\* mg/m<sup>3</sup>  
 \*total dust, 8 hr TWA

**Exposure controls**

Use local exhaust ventilation if airborne concentrations would otherwise exceed applicable exposure limits.

**Personal protective equipment**
**General protective and hygienic measures**

The usual precautionary measures for handling chemicals should be followed.

Titanium dioxide pigments are not irritants but as with all fine powders can absorb moisture and natural oil from the surface of the skin during prolonged exposure. Prolonged exposure should be avoided by wearing suitable protective gloves and clothing.

**Breathing equipment:**

If workplace exposure limits are exceeded, use respiratory protection according to national regulations. The respirator must be selected by a technically qualified individual.

**Protection of hands:**

Check protective gloves prior to each use for their proper condition. Preventive skin protection by use of skin-protecting agents is recommended.

**Material of gloves:**

The selection of suitable gloves depends on the type of job, the characteristics of all substances to be handled and on further marks of quality, which may vary from manufacturer to manufacturer. If the product is used in a preparation of several substances, the resistance of the glove material cannot be calculated in advance and has therefore to be checked prior to the application.

Titanium Dioxide

On February 18, 2020, the European Union (EU) published the delegated regulation classifying certain powder titanium dioxide (TiO<sub>2</sub>) as a suspected carcinogen (Category 2) via inhalation under EU Regulation No 1272/2008 on classification, labelling, and packing (CLP) of substances and mixtures. Classification

(Contd. of page 5)  
requirements came into force on October 1, 2021, mandating hazard labels be placed on certain TiO<sub>2</sub> powder products and certain powder mixtures containing TiO<sub>2</sub> sold into the EU market. This classification of TiO<sub>2</sub> is not based on new science but instead on older scientifically questioned animal test data. Other studies and extensive data, including separate epidemiologic studies of TiO<sub>2</sub> workers, have shown no TiO<sub>2</sub>-specific links to cancer. TiO<sub>2</sub> has been characterized by IARC as possibly carcinogenic to humans (Group 2B) through inhalation (not ingestion). It has not been characterized as a potential carcinogen by either NTP or OSHA.

**Carcinogenic categories**

**IARC (International Agency for Research on Cancer)**

: 2B

**NTP (National Toxicology Program)**
